Zaki Ahmad Mohammad Nazzal

Software Engineer | Flutter, Full-Stack Web and AI Applications

Amman, Jordan / Kuala Lumpur, Malaysia | +60 11 2892 4379 | zakinazal112@gmail.com

Portfolio: zakinazzal.runs-on.dev | GitHub: github.com/ZakiNazal | LinkedIn: linkedin.com/in/zakinazzal

SUMMARY

Computer Science undergraduate who ships real products. Built and deployed several live web apps, including a paid client storefront, an in-browser 3D CAD tool for 3D printing, and an AI study platform. Works across TypeScript, React, Flutter/Dart, Python and C#, with hands-on experience integrating LLMs (Gemini API, local models via Ollama) into practical tools. Comfortable owning a product end to end, from design and code to deployment on Vercel.

EXPERIENCE

Freelance Web Developer | Dieter's Diet (client), Remote | Oct 2026 to Present | dietersdiet.fit

- Built and launched an Arabic, right-to-left storefront for a nutrition client selling three 28-day meal plans, with orders handed off to WhatsApp.
- Developed the site in React, TypeScript and Vite, with optimized responsive images and preloaded Arabic web fonts for fast mobile loads.
- Deployed on Vercel with a custom domain, and built a companion quiz app as a separate deployment.

PROJECTS

Brim, 3D Part Designer for 3D Printing | JavaScript, Three.js, WebGL, Vercel | brim3d.vercel.app | 2026

- Built a browser-based parametric CAD tool that turns plain-language prompts ("clamp for a 25 mm pipe with two M4 holes") into editable 3D parts through a rule-based parser, with a slider for every dimension.
- Added live print checks (bed fit, closed mesh, overhangs, supports), weight, time and cost estimates, a first-version slicer that writes G-code, and STL, 3MF and OBJ export.
- Shipped a marketplace of 30+ editable designs, moderated community publishing, URL-encoded share links with no server storage, and print sending to Klipper, OctoPrint and PrusaLink printers.

CocoStudy, AI Study Platform | React, TypeScript, Vite, Gemini API, IndexedDB | cocostudy.space | 2025 to 2026

- Turns PDFs, Word and PowerPoint files, audio, video and notes into study guides, quizzes (multiple choice, true/false, essay) and an AI tutor grounded in the user's own course material.
- Implemented SM-2 spaced repetition flashcards and an offline-first design that keeps all user data in the browser via IndexedDB; open source under MIT.

Mira Assistant, Local AI Agent Suite | Python, Ollama, Streamlit, LLMs | Built for a company | 2026

- Built a suite of local LLM agents for a company's office team covering contract drafting, quote comparison, CV screening, RFQ outreach, BOQ and tender prep, attendance reports and email routing.
- Delivered as a CLI and a Streamlit web UI running on an on-premises Ollama server (4 GB VRAM GPU), so company data never leaves the office network.

Candidate Scout, Recruiting Agent | Vercel, Search API | 2026

- Built a hosted one-button tool that finds LinkedIn candidates matching a job requirement for a non-technical recruiter, replacing hours of manual searching for 40+ candidates per role.

Hadayakom.3D, Business Dashboard | 2026

- Developing a business management dashboard with order, delivery, product and expense tracking pages.

SmartDesk, AI IT Helpdesk App | Flutter, Dart, Firebase, Gemini API | 2025

- Built ticket creation, assignment and resolution flows for a four-role (user, agent, vendor, admin) helpdesk app in a shared Flutter codebase, collaborating through Git branches and pull requests.
- Integrated the Gemini API to suggest ticket categories and draft first replies, with Firebase Authentication and Cloud Firestore for role-based access and real-time sync.

SCORVYN, Streetwear Brand (Founder) | HTML, CSS, JavaScript, Vercel | scorvyn.shop | 2025 to Present

- Founded a direct-to-consumer streetwear brand and hand-coded its live storefront from scratch (no site builder) with a brutalist-minimal design system, and led launch marketing.

EDUCATION

B.Sc. (Hons) Computer Science, Asia Pacific University of Technology & Innovation (APU), Kuala Lumpur | Expected 2027

- CGPA: 3.00 / 4.00
- Relevant coursework: Data Structures and Algorithms, Mobile App Engineering, Web Applications Development, Object-Oriented Programming, Database Systems, Research Methods

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Dart, Python, C#, Java, C++, SQL, HTML, CSS

- **Frameworks and Libraries:** React, Vite, Flutter, Node.js, ASP.NET Core MVC, Three.js, Streamlit
- **AI and LLMs:** Gemini API, Ollama, local LLM agents, prompt design
- **Data and Cloud:** Firebase (Auth, Firestore, Storage), MySQL, IndexedDB, Vercel, REST APIs
- **Tools:** Git, GitHub, VS Code, Android Studio, Figma
- **Spoken Languages:** English (fluent), Arabic (native)
